

North Korea's Missile Infrastructure: The Case of the Hwasong-14 ICBM

Monitoring North Korea's missile activities under any denuclearization agreement would require complex verification arrangements at all of North Korea's missile facilities. North Korea's infrastructure for producing ICBMs is vast. There are at least nine known sites involved in developing the Hwasong-14 ICBM, and many more sites linked to North Korea's overall missile program.

Key:

-  Hwasong-14 production sites linked to missile components
-  Missile components linked to production sites
-  Other missile related sites
